Task presentation 1

Digital Literacy Awareness Infographic

For Task 1, I created a one-page infographic using **Canva**, a free and user-friendly design tool. Canva provided a wide range of templates and icons that made it easy to build a visually appealing resource. My infographic focused on three key aspects of digital literacy: **safe internet practices, professional online presence, and email etiquette**.

The design included simple icons and concise text to highlight important points. For example, under safe internet practices, I emphasized the importance of strong passwords and avoiding suspicious links. In the professional online presence section, I showed how platforms like LinkedIn and GitHub can help students build credibility. Finally, I included a quick checklist of email etiquette rules, such as using clear subject lines and professional greetings.

One interesting challenge I faced was balancing text and visuals. Initially, I added too much information, which made the design cluttered. After revising, I learned that effective infographics rely on **clarity and simplicity** rather than long explanations. This task helped me understand how visual communication can make digital literacy concepts more engaging and accessible to my peers.
