Building My Digital Portfolio

For Task 2, I created my student digital portfolio by setting up accounts on **GitHub, LinkedIn, and Kaggle**. Each platform serves a unique purpose in developing my professional presence. On GitHub, I built a profile repository with a README that introduces my branch, year, and learning goals. I also created a dedicated project repository to organize my Digital Literacy tasks. This platform will allow me to showcase coding projects and maintain version control throughout my academic journey.

On LinkedIn, I completed my profile by adding my education details at VIT Bhopal University, a professional headline, and a short summary. LinkedIn will help me connect with peers, faculty, and recruiters, making it a valuable tool for networking and career opportunities.

On Kaggle, I set up a profile with a short bio highlighting my interest in data science and machine learning. Kaggle provides access to datasets, competitions, and notebooks, which will help me practice analytical skills and collaborate with the global data science community.

Together, these platforms form a strong foundation for my digital portfolio. Over the next four years, I plan to use GitHub for coding projects, LinkedIn for professional networking, and Kaggle for data science practice, ensuring a well-rounded digital presence.
